BASIC CONNECTIONS

CONNECTION OF AUDIO COMPONENTS

CONNECTION OF TUNER

Connect the output jacks of your stereo tuner to the TUNER jacks of this unit.

CONNECTION OF COMPACT DISC PLAYER

Connect the output jacks of your CD player to the CD jacks of this unit.

CONNECTION OF TURNTABLE

Connect the L (Left) output cord of the turntable to the "L" PHONO jack of this unit, and connect the R (Right) output cord to the "R" PHONO jack. Also be sure to connect the turntable's grounding wire to the GND jack of this unit. The GND jack does not have to be connected if the turntable is not provided with a grounding wire.

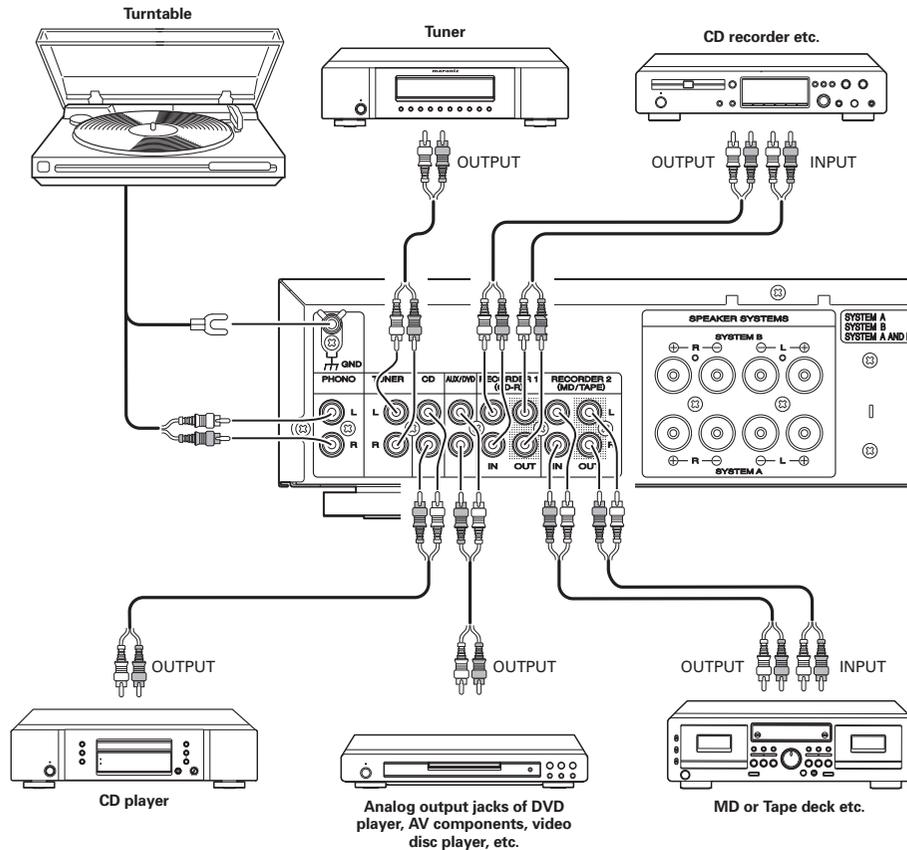

The cartridge of the connected turntable should be of the MM type. To use a turntable with an MC type cartridge, it is required to use a step-up transformer.

BASIC CONNECTIONS

CONNECTION OF SPEAKER SYSTEMS

This unit is equipped with two sets of SPEAKER SYSTEM terminals—SYSTEM A terminals and SYSTEM B terminals. Usually connect your speaker system to the SYSTEM A terminals.

- The speakers in the speaker system should have an impedance between 8 and 16 ohms. If speakers with an impedance of less than 8 ohms are connected, the protection circuitry may be activated during play.
- Connect the Right channel speaker to the R terminals, and the Left channel speaker to the L terminals.
- The output terminals have positive (+: Red) and negative (-: Black) polarity, and each speaker also has the same polarity (+ and -). When connecting the speaker, be sure to connect the terminals with the same polarity (+ with +, - with -).
- When connecting just one speaker set, you can obtain better sounds quality by connecting to SYSTEM A.

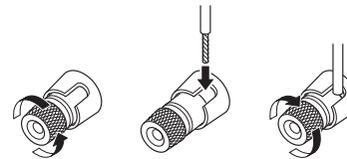

WIRING SPEAKER CABLE

- Be careful not to short circuit in wiring speaker cables.
- Peel off the coating of speaker cable as shown below.

Approx. 1 cm
Cut the coating of cable. Peel off the edge of cable. Twist conductors.

- Wiring with speaker cable.

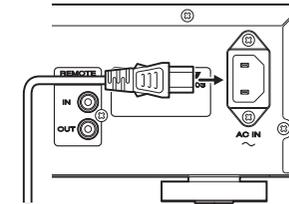

Turn counter-clockwise to loosen. Insert conductor of cable. Turn clockwise to tighten.

Your speaker system must satisfy the below conditions. If it does not, the PM6003's protective circuit will activate, whereby preventing proper playback. In some cases, the amplifier and speakers may be damaged.

- If using 1 set of speakers, total speaker impedance must be 4 ohms or more.
- If using 2 sets of speakers, total speaker impedance must be 8 ohms or more.

CONNECTION OF AC POWER CABLE

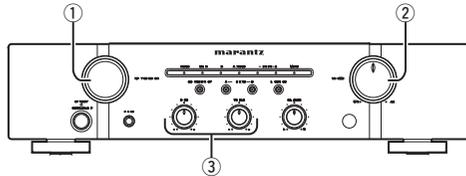

1. Plug the power cable into AC IN jack on the back panel.

2. Turn on the power switch of the audio unit (amplifier, etc.) that is connected with this unit. Set the selector on the connected unit to this unit.
3. Plug the power cable into an AC outlet.

ADVANCED CONNECTION

CONNECTING THE REMOTE CONTROL JACKS

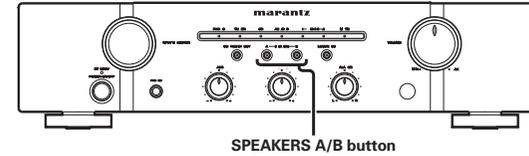

① You can control other Marantz products through this unit with the remote controller by connecting the REMOTE CONTROL terminals on each unit. The signal transmitted from the remote controller is received by the remote sensor on this unit. Then the signal is sent to the connected device through this terminal. Therefore you need to aim the remote signal only to the unit.

Set the REMOTE CONTROL SWITCH on the back of other units (not the PM6003) to "EXT". (EXTERNAL) to use this feature.

② Whenever external infrared sensors or similar devices are connected to Remote Control IN of the unit, be sure to always disable operation of the infrared sensor on the unit by using the following procedure.

REMOTE CONTROL SETTINGS

1. Press and hold the **SPEAKER B** button on the front panel more than 5 seconds.
2. Front remote sensor is disabled and MUTE indicator blink 3 times.

- When the unit is shipped from the factory, the main unit and remote control are set to AMP1.

1. AMP2

To set the remote control to AMP2, hold down both the **AMP** button **1** and **2** number button **2** on the remote control for at least five seconds.

AMP3

To set the remote control to AMP3, hold down both the **AMP** button **1** and **3** number button **2** on the remote control for at least five seconds.

2. Also set the main unit's remote control setting to the same setting as the remote control.**3.** To change main unit's remote control setting, hold down the **AMP** button **1** and press the **DISPLAY** button **3** on the remote control; the remote control setting will be indicated by function indicators on the main unit and main unit setting will be changed same setting as remote control.

AMP1 : PHONO indicator blink 3 times.

AMP3 : CD indicator blink 3 times.

Note

- If the main unit is unplugged the mains cord, the remote control setting will revert to AMP1.
- To set the remote control back to AMP1, hold down both the **AMP** button **1** and **1** number button **2** on the remote control for at least five seconds.

TROUBLESHOOTING

In case of trouble or abnormal operation of the unit, check the following before contacting service personnel. What may seem to be a serious malfunction is often the result of a simple operation mistake. If the trouble persists after checking the following, please contact your dealer or nearest Marantz distributor.

*** The amplifier does not operate and the indicators do not light.**

1. Check to see if the power cable is inserted properly into the power outlet.

*** The indicators light but the amplifier does not operate.**

1. Check to see if the SELECTOR, SPEAKER switches and VOLUME control are properly set.

*** Sound is heard from only one of the speakers.**

1. Check to see if the BALANCE control is properly set.
2. Switch the power of the unit to OFF, and change the connections of the left and right speaker cords. If the sound from the same speaker is still not heard, its connection cord or the speaker itself may be defective.

*** Considerable hum noise is heard when the turntable is played.**

1. Check to see if the plugs from the turntable are properly connected to the PHONO jacks.
2. Connect the grounding wire of the turntable to the GND terminal on the rear panel of this unit. If it has already been connected, try removing it.
3. Check to make sure that the phono cartridge is attached securely to the tonearm.
4. Unplug the power cable and plug it in again after inverting the orientation of the blades.

*** Remote control operation is not possible.**

1. Is the remote controller's transmitter pointed correctly at the remote sensor on the front of the Amplifier?
Or, is there an obstruction between the transmitter and the remote sensor?
2. Are the batteries in the remote controller exhausted?
3. Is there another strong light (from a window, etc.) striking the Amplifier remote sensor?
4. Is an RCA cord connected to the "REMOTE CONTROL OUT" jack on the Amplifier rear panel?
5. Is the remote control code different between the main unit and remote controller?
6. Is the main unit remote sensor disabled?
